SUMMARY

CS graduate (9.59 GPA) with experience translating operational problems into production systems across pharma/manufacturing. Sole technical owner across requirement gathering, vendor evaluation, UAT, and deployment. Track record of structured build-vs-buy decisions, direct CRM implementation ownership, cross-functional stakeholder coordination and escalating critical security vulnerabilities in production ERP systems.

SKILLS

- **Analysis & Design:** Requirements gathering, process mapping, workflow design, gap analysis, UAT, defect tracking
- **Automation & Development:** Google Apps Script, JavaScript, Python, VBA, HTML/CSS, SQL, document automation, PDF extraction
- **ERP & Implementation:** TCS iON ERP - functional admin, master data, RBAC, vendor coordination
- **CRM & Marketing Tools:** HubSpot CRM implementation, Email automation workflows, multi-brand setup
- **Data & Reporting:** Power BI (basic dashboard), Google Sheets analytics
- **Tools:** Git/GitHub, Google Workspace, Figma, MySQL, Supabase, Trello
- **Cloud:** Microsoft Azure (intern), AWS (training)

WORK EXPERIENCE

Planning & Implementation Executive · Cultivator Natural Products

Oct 2025 – Present

Pharma & Manufacturing · Jodhpur · digital transformation and systems development

- Identified operational inefficiencies across 7 departments and independently designed, built, and deployed production systems to address them - zero licensing cost, no DevOps support - each adopted by its target department.
- **CRM - Implementation Owner:** Acted as internal project owner and primary stakeholder contact for end-to-end HubSpot Sales + Marketing implementation. Coordinated across milestone meetings and configured multi-brand setup (two domains, separate workflows).
- **Gmail Follow-up Automation - Build vs. Buy Decision:** Evaluated HubSpot Sequences for sales follow-up automation; confirmed that it cannot thread onto manually-started email conversations. Designed and built a Google Apps Script alternative with a Gmail Add-on panel allowing reps to enroll threads without leaving their inbox, includes auto-stop on reply detection. Rolled out to marketing and sales team.
- **Regulatory Document Generation Engine:** Automated QC document preparation. Non-technical users generate customer document packages via guided workflow - with dynamic parameter selection, and PDF export which spans a 400+ products catalog.
- **Customer Portal - Product Owner (Outsourced):** Conducted structured evaluation of multiple development agencies across commercial, technical, and post-go-live criteria. Acting as internal product owner during active development - defining requirements, reviewing UI mockups, clarifying scope, documented 200+ defects, validated against the agreed SOW and managing weekly delivery milestones. Negotiated contract terms to 62% reduction.
- **Warehouse Management System:** Real-time rack/bin-level inventory visibility across 5 departments - inward/outward tracking, low-stock alerts, batch traceability, a Purchase Requisition workflow that eliminated paper stock requests, audit trails, and manager dashboards.
- **QC Data Automation:** Python desktop application (PySide6, pdfplumber, OCR) that extracts test parameters from lab report PDFs and auto-classifies results against spec limits using a self-adjusting three-tier threshold system — packaged as a standalone executable, eliminating duplicate manual data entry for the QC team.
- **ERP Administration:** Administered TCS iON ERP across two manufacturing sites — user provisioning, RBAC, master data, bulk uploads, UAT, TestRail test case authoring, defect coordination, and employee training.

Stack: Google Apps Script · JavaScript · Python · VBA · HTML/CSS · Google Sheets · MySQL · Supabase · pdfplumber · python-docx · PySide6 · ERP

Cloud Infrastructure Intern · Celebal Technologies

May – Aug 2024

- Configured Azure Monitor alerts with automated email/SMS incident notification pipelines; deployed and configured load balancers connecting VMs and application gateways.

Web Developer — [Virtual Labs](#) · Indian Institute of Technology (IIT) Roorkee

May – Sep 2023

- Built interactive power electronics virtual lab simulation in JavaScript (JSPlumb, Chart.js, Plotly.js) - live at pe-iitr.vlabs.ac.in, used by engineering students nationally.
- Implemented circuit simulation logic, real-time data visualization, and user interaction features.

PROJECTS

Gmail Follow-up Automation

Google Apps Script · Gmail API · HtmlService

- Sales automation tool with per-step cadence, thread-anchored replies, auto-stop on reply, and Gmail Add-on panel - built after HubSpot Sequences confirmed unable to meet threading requirement.

MSDS Auto-Generator

Python · python-docx · XML manipulation

- Reformatted 900+ regulatory Safety Data Sheets into a standardized master template via deterministic label-matching — chosen over AI/NLP extraction for audit traceability.

[Road Complaint Tracker](#)

JavaScript · PHP · MySQL · Leaflet.js

- Full-stack civic platform with geolocation mapping, status tracking, and WhatsApp API notifications.

EDUCATION

B.Tech — Computer Science Engineering

2021 – 2025

Jodhpur Institute of Engineering and Technology (JIET) · GPA: 9.59 · Semester Topper — SGPA 10.00 & 9.83

CERTIFICATIONS

- Python for Data Science — NPTEL (Elite)
- AWS & DevOps — JIET (2023)
- Software Engineer — Infosys Springboard (2023)
