SUMMARY

CS graduate (9.59 GPA, semester topper) with experience translating operational problems into production systems across pharma/manufacturing. Sole technical owner across requirement gathering, vendor evaluation, UAT, and deployment. Track record of structured build-vs-buy decisions, direct CRM implementation ownership, and cross-functional stakeholder coordination.

SKILLS

- **Analysis & Design:** Requirements gathering, process mapping, workflow design, gap analysis, UAT, defect tracking
- **Automation & Development:** Google Apps Script, JavaScript, Python, VBA, HTML/CSS, SQL, document automation, PDF extraction
- **ERP & Implementation:** TCS iON ERP — functional admin, master data, RBAC, vendor coordination
- **CRM & Marketing Tools:** HubSpot CRM implementation, automation workflows, lead scoring, multi-brand setup
- **Data & Reporting:** Power BI (dashboard creation), Google Sheets analytics
- **Tools:** Git/GitHub, Google Workspace, Figma, MySQL, Supabase, Trello, Jira
- **Cloud:** Microsoft Azure (intern), AWS (training)

WORK EXPERIENCE

Business Systems Analyst / ERP & Implementation Executive · Cultivator Natural Products Oct 2025 – Present

Pharma & Organic Manufacturing · Jodhpur, Rajasthan · digital transformation and systems development

- Identified operational inefficiencies across 7 departments and independently designed, built, and deployed production systems to address them — zero licensing cost, no DevOps support. Recognized by General Manager for driving digital transformation and cross-departmental operational efficiency.
- **CRM — Implementation Owner:** Acted as internal project owner and primary stakeholder contact for end-to-end HubSpot Sales + Marketing implementation. Coordinated across 15+ milestone meetings with external implementation partner and configured multi-brand setup (two domains, separate properties and workflows).
- **Gmail Follow-up Automation — Build vs. Buy Decision:** Evaluated HubSpot Sequences for sales follow-up automation; confirmed that it cannot thread onto manually-started email conversations. Designed and built a Google Apps Script alternative with a Sheet-based queue, per-step cadence templates, a sidebar UI, and a Gmail Add-on panel allowing reps to enroll threads without leaving their inbox. Includes auto-stop on reply detection and LockService for concurrency safety. Rolled out to the marketing team.
- **Regulatory Document Generation Engine:** Automated QC document preparation for a catalog of 400+ products. Non-technical users generate customer document packages via guided workflow — with dynamic parameter selection, and PDF export with company letterhead.
- **Customer Portal — Product Owner (Outsourced):** Conducted structured evaluation of multiple development agencies across commercial, technical, and post-go-live criteria. Selected vendor based on requirement understanding, prototype quality, and support commitment. Acting as internal product owner during active development — defining requirements, reviewing UI mockups, clarifying scope, and managing weekly delivery milestones with the external development team.
- **Warehouse Management System:** Real-time rack/bin-level inventory visibility across production, warehouse, QA, purchase, and management — covering inward, outward, transfer, consumption, and return entries. Includes low-stock alerts, batch traceability, AHU monitoring with weekly reports.
- **Task Management Platform:** Workflow system for 40+ users — Kanban, calendar and list views, recurring tasks, Gmail reminders, and analytics dashboards covering task performance, and TAT routing timelines.
- **QC Report Checker Tool:** Python tool extracting QC test parameters from lab reports, loads thresholds from Excel reference, renders pass/fail report, filterable and exportable. Handles structured PDFs and scanned formats via OCR fallback.
- **Additional Systems:** Gift Management System (distribution tracking with auto-balance carry-forward and audit log), Product Label Tracker (version control, obsolescence flagging), Certificate Expiry Tracker (zero missed renewals since deployment).

- **ERP Administration:** Administered TCS iON ERP across two manufacturing sites — user provisioning, RBAC, master data, bulk uploads, UAT, TestRail test case authoring, defect coordination, and employee training.

Stack: Google Apps Script · JavaScript · Python · VBA · HTML/CSS · HubSpot · TCS iON ERP · Power BI · MySQL · Google Sheets · Supabase

Cloud Infrastructure Intern · Celebal Technologies

May – Aug 2024

- Configured Azure Monitor alerts with automated email/SMS incident notification pipelines; deployed and configured load balancers connecting VMs and application gateways.

Web Developer — [Virtual Labs](#) · Indian Institute of Technology (IIT) Roorkee

May – Sep 2023

- Built interactive power electronics virtual lab simulation in JavaScript (JSPlumb, Chart.js, Plotly.js) — live at pe-iitr.vlabs.ac.in, used by engineering students nationally.

PROJECTS

Gmail Follow-up Automation

Google Apps Script · Gmail API · HtmlService

- Sales automation tool with per-step cadence, thread-anchored replies, auto-stop on reply, sidebar UI, and Gmail Add-on panel — built after HubSpot Sequences confirmed unable to meet threading requirement.

[Road Complaint Tracker](#)

JavaScript · PHP · MySQL · Leaflet.js

- Full-stack civic platform with geolocation mapping, status tracking, and WhatsApp API notifications.

EDUCATION

B.Tech — Computer Science Engineering

2021 – 2025

Jodhpur Institute of Engineering and Technology (JIET) · GPA: 9.59 · Semester Topper — SGPA 10.00 & 9.83

CERTIFICATIONS

- Python for Data Science — NPTEL (Elite)
- AWS & DevOps — JIET (2023)
- Software Engineer — Infosys Springboard (2023)
